Sterillium med
Hygienic handrub

EXPERTISE

Having tested the disinfectant **Sterillium med** under practical conditions on volunteers according to EN 1500 (2013) I hereby issue the following evaluation of the test results from the test report of 2014-10-09 B 18564b (test product: VP 579):

Results of the in vitro-test

All required acceptance criteria in the standard EN 1500 (2013) were fulfilled this also includes the results of the neutralization and method validation.

Results obtained under practical conditions

In the testing according to EN 1500 for hygienic handrub phase 2 / step 2 **Sterillium med** was not inferior to the reference method.

Therefore the hygienic handrub product is effective with the following application recommendations:

**3 ml Sterillium med during 30 seconds
rubbed on the hands.**
