Sterillium is an antiseptic used for skin disinfection. It was tested for its efficacy against human rotavirus strain Wa in a suspension test according to the Guidelines of the Robert Koch-Institute (RKI) and of the German Society for the Control of Virus Diseases (DVV) (published in Hygiene & Medizin 12: 460-469, 2005). The effectiveness of the disinfectant was evaluated without organic load. **Sterillium** was examined as an 80.0 % solution. The exposure times were 15 s, 30 s, und 60 s. The product showed within a contact time of 15 seconds a virucidal efficacy against the virus type of ≥ 4 lg-reduction factor.

In conclusion, the product Sterillium is as a ready to use product at room temperature efficient against Rotavirus within 15 seconds application time.
