

This diagram illustrates the assembly of a hydraulic system within a metal frame. The components are shown in an exploded view, indicating their relative positions and assembly sequence. The main components include:

- Hydraulic Pump/Motor Unit:** A central unit with multiple ports, likely the main power source for the system.
- Hydraulic Valves:** Several solenoid-operated valves are shown, which control the flow of hydraulic fluid to the actuators.
- Hydraulic Actuators:** Two large hydraulic cylinders are shown, which convert hydraulic pressure into mechanical work.
- Hydraulic Lines and Fittings:** Various hoses, tubes, and fittings are shown connecting the pump, valves, and actuators.
- Control System:** A control unit, possibly an electrohydraulic proportional valve or a similar control module, is shown connected to the main hydraulic unit.
- Frame and Mounting:** The entire system is mounted on a sturdy metal frame, which provides structural support and alignment for the components.

The diagram is a technical drawing, likely a CAD model, showing the assembly in a perspective view. The components are labeled with part numbers and assembly instructions, which are not visible in this image.
